

IP may be grounded in science, but there's an art to litigating it.

- > Partner and Chair, Intellectual Property Litigation Practice Group
- > Representing clients in complex commercial and intellectual property litigation matters.
- > Focuses on patent, trademark, copyright and trade secret matters spanning a variety of scientific disciplines, including computer science and Internet applications, bioengineering, electrical technologies and lighting systems, mechanical systems, and wireless technologies.
- > 312.212.4979 | kshah@beneschlaw.com

My clients come from a wide array of industries with a wide variety of intellectual property at stake. Each situation is different;

solutions are never plug and-play.

But I know that even the most technical IP litigation can benefit from creative thinking.

Carefully balancing novel approaches with the practicalities of time and budget.

Reconciling fast-moving technology with the measured pace of the legal system.

Always striving for a favorable resolution, so you can get on with your business.

I'm an engineer who thinks like a litigator, a litigator who thinks like a business leader, an interpreter who translates technical issues in terms judges and juries can relate to.

I'm **KAL SHAH**.

I'm on your team.
