

SPEAKING ENGAGEMENT

AI in Workplace Safety: Privacy and Legal Risks | Alyson Waite

MAY 13 - MAY 15

Speakers: [Alyson Waite](#)

Indianapolis, IN
US

ENVIRONMENTAL, HEALTH AND SAFETY SUMMIT

As workplaces increasingly adopt AI-powered monitoring technologies, such as cameras, sensors, and wearables, the potential to revolutionize safety practices is immense. These tools provide real-time insights into potential hazards, enabling proactive measures to prevent accidents and protect employees. From identifying equipment failures to tracking worker fatigue, AI is empowering businesses to create safer environments and reduce risks across operations.

However, with innovation comes responsibility. As organizations embrace AI technologies, navigating complex legal concerns surrounding employee privacy and surveillance laws becomes critical. By thoughtfully integrating AI into workplace safety protocols, companies can achieve transformative results while fostering trust and respect within their workforce. Attendees will leave equipped with practical strategies to harness the power of AI while ensuring compliance and ethical implementation.
