

AI Selection and Deployment – Critical Operational and Regulatory Considerations | Jonathan R. Todd

ABPMP Educational Webinar

DECEMBER 18, 2024

Speakers: [Jonathan R. Todd](#)

AI technologies are rapidly entering the market and adoption is shifting from limited experimentation to full implementation. At the same time, regulators are increasingly vocal about AI-related concerns and new laws are beginning to come into force. Join us for a conversation that explores the current state of AI, with a focus on: present-day, real world applications of AI; best practices for AI selection and deployment; and the legal and regulatory landscape for AI, with an eye toward emerging laws, cross-border considerations, data privacy and cybersecurity compliance, intellectual property protection, and the current litigation environment. In addition, we will specifically explore how AI technologies are impacted by emerging US national security concerns and the wide range of regulations addressing trade in technology. Finally, we will conclude with a discussion around AI governance, in particular how organizations can best deploy effective governance structures to manage AI and mitigate its inherent risks.
