Emerging DSOs should consider tangible, intangible issues before growing too quickly: Expert

Chris Salierno, DDS, chief editor of Dental Economics, discusses consolidation in the dental industry, and advises practices looking to add more offices to listen to dentists who have been there before. He points out that currently 8.8% of U.S. dentists are affiliated with a DSO and that there’s noticeable DSO growth on the macroeconomic level as measured by the number of dentists and locations. On a microeconomic level, he says an individual DSO or multipractice group might want to make sure that their current house is in order first. Salierno says most group practices are faced with challenges such as losing money on marketing, insufficient new patients, patient no-shows, recruitment and retention issues and low associate production. He says large DSOs have the financial footing to support a poor performing location, but small DSOs may not, adding that it’s as important to monitor intangible issues...
such as “esprit de corps” (e.g., patient satisfaction surveys, online reviews, decreased associate turnover, etc.) as much as metrics such as EBITA. In another piece, Salierno says multipractice owners and managers of DSOs can find themselves surrounded by a whole new set of silos, and recommends they merge their practices and get rid of such silos. He contends that those acquiring independent small businesses and merging them into the existing collective face the challenge of integrating equipment, hardware and software, and that failure to replace the practice management and imaging software inadvertently creates silos by hampering practices’ ability to share information. Salierno also shared his take on independently owned dental practices as well as DSOs and the trend toward multipractice growth. He says entrepreneurial dentists are increasingly grouping multiple practices together while DSOs are expanding through de novo offices and acquisitions. He says the trend is no cause for alarm for independent practitioners, believing the business model is alive and well. For those interested in trading chair time for executive duties, Salierno says the time is ripe, with experts and resources available to help grow from one practice to many.

**NADG co-founder says DSO is thriving**

Dr. Andrew Matta, the cofounder of DSO North American Dental Group, says the DSO focuses on setting its own culture and empowering the doctors it partners with. NADG continues to grow since relocating to New Castle in 2011. Matta says what makes NADG unique is that it keeps a traditional patient experience, and works to ensure that the dentists it works with become partners in their company, making NADG doctor-led. NADG now employs 247 people at its resource center in the city, and has partnered with more than 200 dental practices in 11 states. Since moving to New Castle, NADG has invested more than $2 million to refurbish the space and to develop it into a corporate space for team members. Jacobs Holdings bought out two investors to purchase equity with NADG in August, and Matta said it chose Jacobs Holdings because its charitable arm—the Jacobs Foundation—is focused on youth and child development, and has partnered with Carnegie Mellon to study child and youth development.

North American Dental Group expands in Texas, W. Va., Md., Pa., N.Y., N.J. with practice affiliations

North American Dental Group added two practices in Texas—6 Day Dental and East Texas Dental Group—to its group of affiliated dental practices. Both practices offer general and family dentistry and orthodontic care, with multiple offices in Texas. 6 Day Dental has three offices, while East Texas Dental Group has one. NADG also expanded into West Virginia and Maryland by affiliating with Meridian Dental Specialists, which supports 10 offices across Maryland, Pennsylvania, and West Virginia that operate under the names Endodontic Associates of Maryland, MMS Dental Implants & Periodontics, MMS Endodontic Specialists, Monument Endodontics & Periodontics, Monument Periodontics, and Parkersburg Endodontics. NADG also expanded its presence in New York by affiliating with three-practice Scarsdale Oral Surgery, which provides oral and maxillofacial surgical care, as well as New York's Kaye Dentistry and Personal Care Dental of Westchester, which have offices in New York City and Scarsdale that provide reconstructive, cosmetic and implant dental services. Lastly, NADG added New Jersey's Palisades Oral Surgery, a practice providing oral and maxillofacial surgical care in Fort Lee, N.J., to its group of affiliated dental practices.

Aspen Dental opens 800th office as de novo growth continues; quadruples Chicago office space; opens several practices in dental shortage areas

Aspen Dental, a branded network of dental offices supported by DSO Aspen Dental Management, opened its 800th office in the U.S. with a location in Southern Pines, N.C. Aspen says nine new Aspen Dental offices are to set to open across seven states: Fayetteville, Ga.; Kansas City and Lawrence, Ka.; Canton and Royal Oak, Mich.; Kansas City, Mo.; Lincoln, Neb.; Southern Pines, N.C. and Mechanicsville, Va. Aspen says a new office opens every four days, with an estimated 25,000 patients receiving care every day and nearly 12,000 team members across the country. Aspen Dental says its growth is entirely de novo, with every office built rather than via acquisition. In January 2020, Aspen Dental quadrupled office space in Chicago, leasing 200,000 square feet as part of plans to expand its workforce. The company signed a lease for nearly half of a 19-story office building under construction at 800 W. Fulton Market. The DSO said in 2018 it would bring roughly 250 jobs to Chicago. The building is slated to open in spring 2021. Aspen Dental also opened practices in dental shortage areas in four states: It announced plans to open a practice in Mount Pleasant, S.C., an office in Laveen, Ariz., another practice in Georgetown, Texas, and another in Tulsa Hills, Okla.

Pacific Dental Services opens 11 practices in one day to surpass 800-practice milestone; expands to Illinois

Pacific Dental Services (PDS) just surpassed the 800th supported dental practice milestone with its announcement that it opened 11 PDS-supported practices on Dec. 31, 2019. The 800th supported practice, Lake Barcroft Dental Group, is located in Alexandria, Virginia. Its support services network is now present in 22 states. The 11 practices that opened at year-end are located in Arizona, Colorado, Florida (2), New Mexico, South Carolina, Texas (3), Virginia and Washington. PDS also expanded into Illinois with the opening of its first supported dental practice in the state. The PDS-supported office in Fairview Heights, Fairview Heights Dentistry, will provide CEREC CAD/CAM same-day dentistry, digital x-rays, laser, online scheduling, and the VELscope Enhanced Oral Assessment System, among other technologies at the forefront of oral and whole-body health care. The expansion means PDS’ network of supported practices now spans 22 states.

Envista anticipates growth in business from DSOs
During its Q4 earnings call, Envista Holdings, a global family of three companies and more than 30 dental brands, explained that 2019 was a transformative year where it became a fully independent company and added to its portfolio through its first acquisition of Germany's Matricel. Envista says it will continue to invest and expand capabilities as it anticipates demand for the Spark clear aligner system, made by its Ormco subsidiary, will ramp up throughout the year. Envista adds that it’s encouraged by its progress with DSOs as it has a team dedicated to helping these professionals grow their businesses and practices, and expand in the specialty procedures of orthodontics and implants to provide broader clinical services and capture a larger share of their customer spending. It says sales growth was more than 10% at the top 10 DSOs collectively in 2019, and believes DSO customers will look to boost their volume over the next several years.

Elite Dental Partners works with EDMS to centralize data for affiliated practices
Elite Dental Partners, a DSO with 111 locations with more than 1,300 employees in 13 states, says its recent growth has been combined with a focus on the development of infrastructure to streamline support functions and provide tools for operational teams in the field. To help affiliated services, it partnered with Canada-based Enterprise Dental Management Systems (EDMS) to build an analytical toolbox to help integrate various patient management systems (PMS), data warehousing and reporting for measuring business performance. Elite says DSOs need to choose a technology partner that is flexible to support the changing needs of a growing organization to add new reports, analytical tools, or integrations with third-party solutions. Elite adds that EDMS allows it to integrate data from cloud-based systems and serves as its data bridge as the DSO transitions its offices to one single cloud-based PMS.

**Schulman Study Group reforms as member-owned orthodontic DSO SSG Management**

The former Schulman Study Group has re-formed as a DSO known as SSG Management (SG). The organization is independently and equally owned by its members. Collectively, the 134 SG members have 282 practice locations and annual revenues of $400 million. Each member contracts for non-clinical services to create efficiencies and cost savings for his/her independently owned practice. By changing from a study group to a DSO, SG seeks to offer benefits such as competitive pricing on c-suite level practice services to a greater number of members. Its website offers information for orthodontists who are interested in becoming members, and companies looking to offer their products and services to SG-member orthodontists can learn about the Preferred Supplier Program and meeting sponsorship opportunities. As a DSO, SG will consider business opportunities to boost its growth in areas such as expanding orthodontic practices, along with investment in the buying and selling of orthodontic practices.

**Banking expert details considerations for dentists eyeing group practice model**

Dan Croft, head of Healthcare Practice Solutions Group at TD Bank, points to a recent survey showing that dental professionals are optimistic about the future of the profession, with many interested in forming or becoming part of a group practice. Among dentists, 84% anticipated purchasing, buying into, merging, or selling their practices soon, with 42% expecting this within the next four years. Dentists were found to be more eager than other practitioners to maintain ownership of their businesses rather than be absorbed by large DSOs. Croft looks at how dentists can balance independence and scale their businesses, adding that many dentists who want to maintain ownership are eyeing group dental practices to improve economies of scale, cash flow and flexibility to cater to patient needs. These practices are designed to better compete with the corporate DSO model. He describes scalability, reduced costs and additional resources as the benefits of group practices, adding that younger practice owners are trending toward the group practice model, while dentists were found to be the most likely medical group to sell their practices through a transition specialist or practice broker when they retire. Of the 97% of dentists who plan to sell their practices, 63% believe there will be barriers to maximizing sale price, such as a limited buyer pool (29%), buyer financing (26%), and low appraised value (21%). Croft also looks at several group practice considerations: practice expansion and relocations, business processes, and a centralized management team.

**Candid uses AI to accelerate teeth straightening process through app. orthodontist**

Aligner company Candid, which sells at-home starter kits, is using artificial intelligence to speed up treatment by as much as 30%. The firm ships patients diagnosis kits and offers an app to guide patients through treatment. The standard plan takes about 32 weeks, with aligner switches every 14 days. Progress is tracked by an assigned orthodontist, either through the app or in-person at a Candid studio. Candid says its Dental Monitoring treatment plan provides AI-based remote monitoring capabilities to help connect orthodontists and remote patients. It connects with patients every seven to 10 days to ensure they are wearing aligners correctly. Patients put a cheek stretcher in their mouth and take pictures of their teeth with and without the aligners. The pictures are analyzed by AI, which sends the information to an orthodontist for further analysis. It claims that treatment for patients with Dental Monitoring takes 20% to 30% less time than those using the standard Candid program.

Dental platform Dandy launches with Philly dentists to combine teledentistry, in-person care

Pennsylvania-based Dandy, a dental platform that combines in-person treatment and teledentistry, has launched in Philadelphia in what it says is in response to the lack of medical supervision in the clear aligner market. The company partnered with dentists in the city to address issues that could affect treatment. The platform lets patients book an appointment online with a local dentist for a 3D scan, X-rays and a full dental checkup. Patients then receive custom aligners within days. Dandy says most patients will see a dentist two to three times to adjust aligners or undergo procedures for optimal outcomes. Patients can also use the app to track their treatment and share progress. The service costs $1,900, or $88 a month until the balance is paid, and includes the initial checkup, aligners and a retainer. Dandy plans to expand nationwide in 2020.

Weave rolls out payment platform for dental practices

Weave, a Utah-based startup, debuted Weave Payments, a full-scale payment processing platform for small and medium-sized businesses. The platform joins Weave’s telephone-based practice management software, which aims to help service-based businesses like dental practices grow and retain patients by managing patient communications. Weave Payments includes features such as Text to Pay, fast-processing terminals and mobile wallets, with the goal of reducing back-end paperwork and reporting. The features allow for dental practices to accept all commonly used forms of payment in a convenient and easy manner. Weave’s platform is currently used by over 13,000 businesses.

Curve Dental launches platform to allow dentists to send prescriptions from device to pharmacy, partners to offer members discounted pricing

Utah-based dental software provider Curve Dental upgraded its cloud platform to allow dentists to send a new prescription or renewal to pharmacies from any digital device. Curve partnered with DrFirst to allow its cloud-based dental practice management platform to manage electronic prescriptions, write and send prescriptions and ensure compliance with specific state regulations. The platform displays commonly prescribed medications based on historical prescribing behaviors, reducing the need to search for drugs and human error. Curve Dental also partnered with The Dentists Supply Company (TDSC), an online dental supply company, to provide discounted pricing for TDSC shoppers and Curve customers. The companies say the agreement could save buyers up to 24% off MSRP. They add that combining Curve’s practice-management software with TDSC’s dental supply savings allows dental practices to compete with DSOs by lowering overhead costs while using better technology, enhancing the patient experience, maximizing data security and improving profitability through cloud technology.

OMS Logistics offers DSOs mobile oral surgery service platform to help prepare for anesthesia

Tennessee-based OMS Logistics (OMSL) has developed a mobile delivery system for surgical services and general anesthesia in the dental industry. The platform uses cloud computing and an anesthesia information management system (AIMS) to offer capabilities also seen in hospitals and ambulatory surgery centers. Practices can use the technology to medically screen outpatient encounters for appropriateness for general anesthesia before the day of the appointment. The platform captures physiologic data in a cloud-based database to allow OMSL to monitor patient safety. OMSL contends that the value-add of its platform is that it uses a team of surgeons to service a dental network and can provide multiple specialists, allowing dental practices to have predictable surgical days per month and still have coverage when a surgeon is not available. It contends that DSOs can use this approach to insure patient access and rapid implementation. OMSL says it serves 31 offices, three large DSOs and multiple states. OMSL is also collaborating with Cornerstone Dental of California, a specialty DSO providing endodontic services to large group practices.

**TUSK Partners’ 2019 State of the Dental Economy looks at PE interest, new groups, big transactions**

TUSK Partners released its 2019 State of the Dental Economy report, pointing to change, growth, M&A activity and new entrants into the DSO market. It points out 2018 ended with Heartland and Pacific Dental both adding 100 practices or more and North American Dental Group growing the number of affiliated practices by 49% in one year. Highlights for 2019:

- Investor Interest in DSOs Up: It received a call per week from private equity groups interested in the DSO space and saw the rise of non-DSO strategic investment from media companies and real estate investment companies looking to leverage their assets and synergies into the DSO space.
- New Groups Emerged: While new group dental practices and DSOs are looking to technology, marketing and disruptive technologies to grow, the next wave of DSO leaders are bringing fresh, new ideas to a continually evolving economy.
- Hiring and Retaining Talent was a Struggle: There is a small pool of seasoned talent in the DSO space due to a lack of experience people. The market is growing faster and has more human capital needs at the operations, marketing, finance and executive level than ever before. To find talent, DSOs are either looking outside of the segment with the help of PE firms, or candidates are quickly gaining upward mobility within the same organization or by jumping to a newly formed group.
- Massive M&A Activity: Large transactions included the partnership of Decision One Dental Partners (D1) & Smile Brands, Mid-Atlantic Dental’s acquisition of Dental One Partners, the sale of North American Dental Group (NADG) to Jacobs Holdings, Heartland growing to over 1,000 practices and Pacific Dental Services adding 200 affiliated practices in 2019.

SmileDirectClub reports $180M revenue for Q3 2019

SmileDirectClub announced total Q3 revenue of $180.3 million, a 50.6% increase compared to Q3 of 2018. For the quarter, SmileDirectClub reported a $387.6 million net loss. During Q3, it reported 106,070 unique aligner shipments, up from 72,387 in the same quarter the year prior. Average aligner gross sales were $1,788 for Q3 of 2019, compared to $1,773 in 2018. The net loss was mostly attributable to the company’s heavy spending on marketing and sales, as well as other expenses. Sales and marketing expenses more than doubled in Q3 to $131.3 million, roughly 78% of SmileDirectClub’s total revenue. General and administrative expenses also increased as the firm said it would spend more on expanding the locations of its small stores as well as on technology, data analytics, data science and financing.

DentalPost survey finds less than half of dental hygienists satisfied with their pay

DentalPost’s State of the RDH Career in 2020 is a survey of dental professionals published in RDH Magazine. DentalPost is a dental job search board and its survey consists of 30 questions ranging from compensation and benefits to how dental industry employees felt about their roles in the dental community and timely changes happening in the industry. Among its findings:

- 44% of dental hygienist participants are satisfied with their overall pay;
- 38% are happy with their overall employee benefits. Flexible scheduling and paid holidays are benefits dental hygienists value most;
- 24% feel overworked and would prefer to work fewer hours. Only 8% would prefer to work more hours;
- 43% of dental hygienists are open to a job change within a year;
- Almost half of the respondents earn between $51,000 and $70,000, with 16% making more than $80,000; and
- Several coaching opportunities to help employers retain employees include improving the annual review process as respondents cited disappointment in their annual raise (61% dissatisfied), along with confusion and frustration with the review process itself.

DentalPost on Dec. 17, 2020

33% of dental practices not found in Google search results

Dental practices continue to lack digital marketing execution despite the billions of dollars spent annually, according to a DMscore study. California-based DMscore studied 54,000 dental practices. The study was conducted in December 2019 with data collected over the two years prior. The company analyzed the digital marketing efforts of the dental practices. The study found digital marketing is under-utilized in the dental industry, such as paid search advertising, directory presence and search engine optimization. Across the country, 71% of dentists have Yelp profiles. However, 20% of the profiles are “unclaimed” by the practice they work at. Dentists should ensure they are claimed by the dental practice where they are employed to exert more control over the way their business is perceived. Additionally, a little more than 33% of dentists had little to no visibility when it came to Google searching.

**ADA seeks comment on proposed standard, revised technical report**

The American Dental Association Standards Committee on Dental Informatics approved the following documents for circulation and comment:

- **Proposed ANSI/ADA Standard No. 1094 for Quality Assurance for Digital Intra-Oral Radiographic Systems:** Quality assurance, as this relates to digital intraoral radiography, entails the consistent production of X-ray images to provide the maximum amount of diagnostic information with minimal radiation exposure to the patient. There are essentially four components involved with any digital intraoral imaging system: the X-ray source, the digital image acquisition device, the image display device and the image viewing environment. Each of these components will be addressed in this standard.

- **Proposed revision of ADA Technical Report No. 1088 for Human Identification by Comparative Dental Analysis:** Positive identification of unknown human remains or an unidentified living individual by comparative dental analysis requires both the submission of supporting documentation from the dental provider(s) who treated the patient, as well as documentation of the remains or the individual. The technical report aims to provide the best practices for comparative dental analysis for obtaining comparative forensic dental data, as well as the methodologies to reconcile that data in order to establish an identification.

**Mexican city of Los Algodones known as ‘Molar City’ for number of dental clinics serving Americans**

The Mexican town Los Algodones, situated on the border across from California, has become known as “Molar City” since becoming home to an estimated 600 dentists serving Americans seeking to save on dental care. The clinics offer bridges and root canals at half what they cost in the U.S. The town is home to fewer than 5,000 permanent residents. Dental tourism is mostly from retired Americans and Canadians, since Canada’s national health care system doesn’t include dental coverage. It’s estimated that 65% of medical tourism is for dental care and is mostly due to costs. Patients Beyond Borders estimates a bridge containing four implants to replace lost teeth cost an average of $21,500 in the U.S. in 2018, compared to $9,300, not counting travel expenses, in Mexico. As a rule of thumb, Patients Beyond Borders advises any treatment that costs more than $6,000 in the U.S. can be performed for less, including travel costs, abroad. The biggest clinic in Los Algodones, Sani Dental Group, treats 10,000 patients annually, 80% of whom are American. Half of them are from Arizona, California and Nevada. Many clinics in the town are set up for foreign patients, with all employees speaking English, having a call center with a U.S. phone number, offering free transportation to and from the airport and providing discounts or complimentary accommodations at hotels.

**Vietnam turning into medical tourism destination for dental, cosmetic care**

Foreign tourists are part of Asia’s latest medical tourism industry. Vietnamese officials hope medical tourists will emerge from the threefold increase in arrivals between 2010 and 2018. The key attractions: dentists and cosmetic surgery. Vietnam’s political stability, affordability of healthcare and the relatively high quality of certain types of medicine are driving the incipient trend already, country analysts say. Vietnam stands to join Asian peers such as Singapore, Thailand and Taiwan as magnets for medical tourism, yet charge less.

*VOA News on Dec. 18, 2019*
60% of medical tourism patients travel for dental care

Many people who chose to travel outside of the U.S. for medical treatments do so for dental care, according to a survey released Jan. 29 from eHealth. 21% of respondents indicated they would travel internationally for medical care. Of the patients who have already traveled for medical reasons, 60% did so for dental care. When asked why they were inclined to travel, 74% cited lower costs for dental care. Meanwhile, other kinds of care patients received internationally include medically necessary surgery (22%), vision care (20%), elective or cosmetic surgery (18%), chronic disease treatment (15%) and acute disease treatment (13%).

Becker’s Dental and DSO Review on Jan. 29, 2020

Ohio legislation would restrict mobile dentistry, mandate them to provide patient records

Ohio state Rep. Scott Lipps proposed a bill that would regulate mobile dental units in the state. Currently unregulated in Ohio, mobile dental units treat many Medicaid patients, but Rep. Lipps contends these patients can struggle to get copies of X-rays or records. His bill would require mobile dentists and the unit to register with the Ohio dental board and to provide patient records through a statewide database. The bill passed the Ohio House of Representatives and is being debated in the state Senate.

WVXU on Dec. 4, 2019

Bill would authorize dental therapists to provide routine dental care

A coalition of Oregon health and dental care organizations, educators, Tribes and tribal organizations are supporting legislation to be introduced at the start of the 2020 Oregon legislative session that would make basic dental care available to more Oregonians. The legislation, Senate Bill 1549, would expand dental care access by authorizing the licensing of dental therapists, primary dental care professionals who provide preventive and routine care under the supervision of a dentist. This healthcare delivery model is used worldwide for over a century and was introduced in the U.S. by Alaska Natives 15 years ago. Since then, 11 other states have authorized dental therapy in some or all settings.

The World on Jan. 30, 2020

Lawmakers push bill to certify dental therapists

Those who support the state licensing a new type of mid-level dental provider are pushing ahead with legislation that got a public hearing before the Assembly’s Medicaid and Oversight Reform Committee. Under bills authored by Rep. Mary Felzkowski, R-Irma, and Sen. David Craig, R-Town of Vernon, dental therapists would work under the supervision of dentists. They would be able to provide preventive and routine restorative care, such as filling cavities, placing temporary crowns and extracting severely diseased or loose teeth. Wisconsin struggled to provide dental care for those with lower incomes. The Wisconsin Dental Association and the Marquette University School of Dentistry oppose the proposal to create and license dental therapists, having expressed concerns about the level of training therapists would receive. In addition, the WDA argues higher Medicaid reimbursement for dentists treating low-income patients could improve access. The bill does not require dental therapists to locate in underserved areas but would allow those licensed in Minnesota to practice in Wisconsin.

UCSF dentistry alumus donates $10M to school

A UCSF School of Dentistry alumus gave the school $10 million, which stands as its largest gift to date, strengthening the school’s position as a global leader in oral health and oral health sciences through the development of a modern curriculum, recruitment and retention of world-class faculty members and professional development and mentorship programs for junior faculty. The anonymous contribution will establish an endowment, providing a steady and lasting source of income to sustain the long-term vision of the current and future deans of the school and the future of oral health.
*UCSF on Jan. 30, 2020*

2019 legislative wins set stage for expanded access to oral healthcare

Significant strides in oral health policymaking in 2019 have helped set the stage for improved access to care for many Americans in 2020 and beyond, especially for those with limited incomes or who live in areas underserved by dental professionals. However, the strong trend toward more practice consolidation in the dental care industry is likely to continue, which could bring more efficiencies in how care is delivered. In 2019, three states expanded Medicaid coverage for dental benefits to adults, while four others authorized the midlevel providers known as dental therapists to practice within their borders. There is also the potential for progress in the fall of 2020 when the U.S. surgeon general is expected to release a major report on oral health that outlines the federal government’s vision for improving outcomes and care delivery. Some highlights from 2019 and topics to watch for in 2020 that may affect access to dental care and how it is delivered include dental coverage for adults on Medicaid, expansion of dental therapy, the surgeon general’s oral health report and a continued consolidation of dental practices.

**New law increases dental plan transparency, protects dentist-patient relationship**

CDA-sponsored legislation that further increases dental plan transparency became law on Jan. 1, 2020. AB 954 signed in October 2019 by Gov. Gavin Newsom, requires dental plans to be more transparent about the leasing of dental networks. The law will reduce patient and dentist confusion caused by the increasing number of plans leasing their networks to other payers. Through the provisions outlined in AB 954, the contractual information provided will enhance clarity for patients and dentists on the patient’s potential out-of-pocket costs while protecting the dentist-patient relationship through a more informed treatment planning process. Medicare or Medicaid dental plan agreements are exempt from the requirements of the law.

*CDA on Jan. 27, 2020*

**Maine proposal would eliminate dental insurance waiting periods for kids**

A proposed bill would eliminate insurance waiting periods for anyone under the age of 19 in Maine, according to CBS and CW+ affiliate WABI TV5. Jonathan Shenkin, DDS, a pediatric dentist in Augusta, Maine, introduced the idea to state Sen. Heather Sanborn, D-Portland, after seeing the effects of delayed dental care due to waiting periods. Dr. Shenkin had three patients in pain who couldn’t receive treatment because their parents were paying a premium for dental insurance and couldn’t afford dental care at the time, according to WABI TV5. Orthodontic care is not included in the proposed changes.

**North Carolina proposal would let dental hygienists practice without supervision**

The North Carolina Board of Dental Examiners approved a proposal that would allow dental hygienists to provide care for patients who haven’t met the prior exam requirement. The prior exam rule requires a prior dental examination within 120 days for patients receiving care from public health programs. The North Carolina Division of Public Health recommends individuals visit the dentist twice a year, yet local groups providing care to dental shortage areas say the “prior exam rule” inhibits that possibility. William Donigan, DDS, dental director for Gastonia, NC-based Gaston Family Health Services, said the proposed rule changes are “vital” to North Carolina communities. The revision would allow dentists to provide dental hygienists with written orders so they could serve the community in mobile dental units, Dr. Donigan said. The proposal is expected to be addressed by the Rules Review Commission in January and, if approved, the rule could go into effect as early as February 2020.

**Patterson, FTC reach agreement to settle price-fixing allegations**

Patterson Companies entered a settlement agreement with the Federal Trade Commission after a judge ruled that Patterson illegally colluded with Benco Dental Supply Co. in a price-fixing arrangement. The company determined that a settlement was in its best interest and allows it to avoid the costs, distraction and uncertainty related to the matter. The agreement will see Patterson train employees to comply with federal law, file five annual compliance reports and appoint an internal compliance officer to handle antitrust issues. As part of the settlement, Patterson won’t pay any fines or admit wrongdoing.

**ADA revokes ‘The Dentist's Prayer,’ revises religious diversity policy**

The American Dental Association House of Delegates voted to rescind “The Dentist’s Prayer,” used by some dental societies during meetings and change its policy regarding religious diversity. “The committee considered best practices and agreed that religious diversity must include those with different beliefs as well as those who are not religious,” Judith Fisch, DDS, chair of the committee said. The board also recommended that the house remove the prayer from ADA policy and update the religious diversity policy to reflect a neutral stance. The house decided that meetings can begin with “a personal moment of reflection or silent prayer.”

**Delta Dental demands repayment after a system error overpaid crown procedure claims, CDA says**

The California Dental Association encouraged dentists to act after a Delta Dental of California system error accidentally reimbursed dentists for replaced crowns. The error affected about 350 self-funded dental groups. Delta Dental sent out adjusted claims statements to about 1,000 dentists in the state, seeking repayment for the crown procedures. The statements explain that patients are responsible for certain payments made for replacement crowns they received prior to the five-year requirement for dental crowns. CDA called on dentists to either file a provider dispute with Delta Dental or manually refund the company and seek payment from the patient. If a dentist doesn’t dispute the demand, Delta Dental can legally deduct the overpaid amount from future claim payments.
21 plaintiffs drop class-action claims against SmileDirectClub

Twenty-one consumer plaintiffs who are part of a class-action complaint against SmileDirectClub have withdrawn their claims, leaving one plaintiff in court and one in arbitration. The 21 plaintiffs filed an official notice of voluntary dismissal under Ciccio et al v. SmileDirectClub after the court sent the original consumer plaintiff to arbitration.

New Jersey court sides with SmileDirectClub over state dental association' claims against company

The Superior Court of New Jersey granted SmileDirectClub’s motion for summary judgment against the New Jersey Dental Association, with the company stating that the court concluded that the association’s allegations about the company’s business and the independence of the doctors who use its network are false. SmileDirectClub claims the court decision verifies that its model is in full compliance with the law, and that SmileDirectClub is not engaged in the corporate practice of dentistry.

Federal government approves two ADA-developed forensic dentistry standards

The U.S. government approved two forensic dentistry guidelines developed by the American Dental Association Standards Committee on Dental Informatics:

1. The American National Standards Institute/ADA Standard No. 1058: Forensic Dental Data Set standardizes terminology dentists should use when submitting patient data to help identify human remains or a living person with amnesia. It was created in response to attempts to identify victims in the aftermath of the 9/11 terrorist attack.
2. The ADA Technical Report No. 1088: Human Identification by Comparative Dental Analysis provides information on the process of identifying people using dental analysis. It also educates dentists on what information they must share if involved in that process.

**ADA urges Senate panel to help speed drug application process**

The American Dental Association sent a letter to the Senate Committee on Health, Education, Labor and Pensions, urging it to pass legislation that would change the FDA's regulation of over-the-counter drug. The letter calls for the committee's support for the Over-the-Counter Drug Safety, Innovation and Reform Act, which would allow the FDA to update a drug monograph by administrative order instead of through the rulemaking process. The ADA warns a drug product that currently meets a monograph's requirement, including acceptable ingredients, testing methods and packing and more, can “bypass the rigorous and expensive new drug application process.” The ADA contends that the new law could help develop an OTC “single strength-controlled acetaminophen-ibuprofen combination drug,” a type of drug that can serve as a safe, effective and accessible alternative to opioids.

**American Dental Association urges Congress to pass Ensuring Lasting Smiles Act**

The American Dental Association sent a letter to the Health Subcommittee of the House Committee on Energy and Commerce, asking lawmakers to pass legislation that would require all private group and individual health plans to cover necessary procedures that repair or restore congenital anomalies. The ADA argued that the Ensuring Lasting Smiles Act would remove barriers that prevent access to diagnosis and treatment for congenital anomalies. It claimed many private health insurance companies “routinely deny or delay follow-up or corrective procedures claiming that they are cosmetic in nature—which fails to recognize the medical conditions of these patients.”

**ADA announces interim policy on vaping**

The American Dental Association released a new interim policy on vaping, calling for a complete ban of vaping products that aren’t approved by the FDA. The ADA policy advocates for regulatory or legal action to ban the sale and distribution of all e-cigarette and vaping products, except for those approved by the FDA for tobacco cessation purposes and available by prescription only. The policy also pushes for funding to study the safety of e-cigarettes and vaping products for tobacco cessation purposes and their effects on oral health.

**Florida dental practice sued for sending thousands of unsolicited texts**

A class-action suit was filed against alleges TLC Dental-Hollywood, a Florida dental practice, claiming the practice sent text messages such as “We are open today!” without consent, violating a federal robocall statute. The complaint alleges TLC sent texts to class members using an automatic dialing system without prior consent, which violates the Telephone Consumer Protection Act. The act stipulates that companies sending unsolicited messages risk being sued under federal law. TLC allegedly sent thousands of unsolicited text messages, which class members contend caused injuries such as invasion of privacy, aggravation, annoyance, intrusion on seclusion, trespass and conversion. The suit seeks injunctive relief along with statutory damages up to $1,500 per text message.

**American Dental Association files lawsuit against Delta Dental alleging anticompetitive conduct**

The American Dental Association and two individual dentists are suing Delta Dental over claims that it violated antitrust laws and engaged in anticompetitive conduct. They allege Delta Dental designated certain areas for operation and divvied up the U.S. market to restrict competition and reduce reimbursement rates for dentists. The lawsuit names Delta Dental Plans Association, its affiliated national entities and 39 independent Delta Dental companies. Other dentists have file class-action lawsuits against Delta, alleging antitrust violations. The ADA says its complaint seeks court certification as a class action lawsuit.

**Mississippi dentist sues Delta, accuses company of price-fixing and conspiracy**

Delta Dental is being used by a Mississippi dentist accusing the dental insurer of price-fixing and conspiring to lower compensation for dentists. The suit alleges Delta Dental wields substantial market power by compelling dentists to accept below-market reimbursement for services, which results in having lower incomes and fewer patients as a result of Delta’s unlawful conduct. The suit also claims that the American Dental Association found dentists’ average, inflation-adjusted net income fell significantly from 2001-18, due in part to Delta Dental’s anti-competitive conduct. The suit, which seeks class-action status, calls for Delta to be barred from restricting areas of competition, and seeks damages and protection from retaliation for plaintiffs. It follows a suit filed by the ADA accusing Delta Dental of violating antitrust laws and engaging in anticompetitive conduct.

**Hoverboard dentist guilty on 46 counts, “unlawful dental acts”**

An Anchorage, Alaska-based dentist was convicted of 46 charges including felony fraud charges and “unlawful dental acts,” which included performing oral surgery while riding on a hoverboard. The five-week trial found Seth Lookhart, DMD, guilty of medical assistance fraud, scheme to defraud, illegal practice of dentistry and reckless endangerment. The dentist unnecessarily sedated patients to maximize Medicaid payments, removed teeth without permission and failed to meet professional patient care standards. His practice, Lookhart Dental, was also found guilty of all 40 counts alleged against it. Superior Court Judge Michael Wolverton said the state’s evidence was “often supported, and often in excruciating detail, by Lookhart’s own texts, photos and videos.” In July 2016, the dentist filmed a “dental extraction procedure on a sedated patient while riding a hoverboard” and then sent it to several people.
